

Kyneton Water Reclamation Plant

Waterway health data

February 2025 update – During February 2025, no flow was recorded in the Campaspe River at the Kyneton gauging station. In addition, there was no treated water released from the Kyneton WRP to the Campaspe River during February 2025. Low or no flow conditions also mean that there is insufficient water in the river for the instream water quality testing units to record accurate results. Therefore, there is no water quality update for February 2025. The next monthly water quality update will occur when there has been sufficient flow in the river to record accurate results.
